About the fund

The **iMGP DBi Managed Futures** fund aims to generate long-term capital growth by replicating the pre-fee performance of a representative basket of leading managed futures hedge funds.

Factor analysis is used to determine the key positions of these funds, which are then replicated through highly liquid futures contracts across equities, fixed income, currencies and commodities.

Structured as a UCITS fund, it is an efficient way to access this style of investing that reduces costs, mitigates single-manager risk and offers daily liquidity.

- #1 Seeks to **replicate the pre-fee returns** of a representative basket of leading managed futures hedge funds.
- #2 Aims to **minimize three key risks** of hedge fund investing: low liquidity, concentration risk and selection bias.
- #3 Takes active positions in futures contracts across the asset classes while offering **daily liquidity and lower fees**.

The team

Founded in 2012, DBi is a New-York-based innovator in the liquid alternatives space with one of the longest live track-records.

Investment process

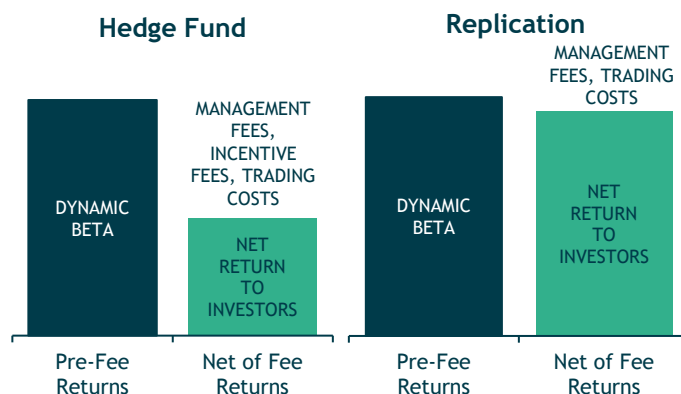

Why own managed futures?

Managed Futures have a **low correlation** to other major asset classes, which means they can provide a degree of protection during periods of market stress.

DBi's approach to managed futures

DBi believes fee reduction is a major driver of alpha for Managed Futures investors. Its approach seeks to optimize net returns to investors by approximating the main exposures that drive performance, minimizing trading and implementation costs, and offering lower all-in fees.
